

Complete Store Water Quality Systems with Two Outlets

Model EQHP-TWIN 108SP
Water Quality System

Features

108,000 Gallon Water Quality System

Two outlet water filtration and scale-inhibition system for high flow-rate and capacity environments

- Two separate streams, both with reduced sediment and chlorine taste and odor, exit the manifold. One stream has scale-inhibition media added from a dedicated cartridge to reduce the ability of lime scale to precipitate. The other stream supplies cold beverage dispensers and has no added scale inhibitor.
- System includes a two-cartridge manifold with built-in pressure gauge, inlet water shut off valve, outlet check valve, mounting brackets, two cartridge filters and a dedicated external scale-inhibition cartridge.
- Consistent great-tasting beverages from water with reduced sediment and chlorine taste and odor.
- Incorporates multi-zone pharmaceutical grade pleated nylon pre-filter.
- Pre-filter offers exceptional sediment holding capacity and particle reduction to 0.2 microns.
- NSF Standard 42 and/or FDA CFR-21 compliance provides assurance of safety. Certified by NSF to Standard 53 for cyst reduction.
- Reduced scale formation by the controlled release of proprietary scale inhibitors as tested by the manufacturer.
- Patented Quick Connect Head uses encapsulated cartridge design allowing for fast and easy change-outs with a 1/4 turn while minimizing the possibility of leakage and contamination.
- Auxiliary inlet gauge port allows optional monitoring of differential water pressure.
- Filter cartridges incorporate carbon block media and require no pre-activation.

Dimensions & Specifications

Model	Product #	Service Flow Rate & Capacity	Micron Rating	Application
High Volume				
39000.0013	EQHP-TWIN180SP	10 gpm/ 108,000 Gallons	0.2	Complete store system needing 108,000 gallon usage per 6 months.

Note: Inlet and outlet plumbing connections are 3/4" FNPT.

System maximum operating pressure is 100 psi (862 kPa) and operating temperature 100°F (38°C).
